I know Jérémie Kalfon in my role as a lecturer on the CO837 Natural Computation course (Autumn 2017). Throughout he seemed to follow the course very well, and actively participated with detailed and interesting questions about the course material.

I have also asked Mr. Kalfon to do his Msc project in my group. This project will involve finding suitable unsupervised machine learning methods to understand a large scale data set coming out of a bioinformatics project. We expect to publish this work in due course.

Altogether, I found Mr. Kalfon to be extremely engaging in conversation. He also seems to be aware of the latest developments in computers science and neuroscience research.

Based on my interaction with Mr. Kalfon so far, I have no hesitation recommending him for study at your institution. I am confident that he will make an exceptional contribution to the intellectual life at your institute.

Best regards,

  
Dominique Chu
